PROJECTS

Github User Finder — *React, JavaScript*

July 2020

A web app that searches for GitHub users. Implemented with the Github API to get the users information including username, website, their GitHub URL and their most recent repositories. Project focused on learning React fundamentals.

COVID19 Visualization — *D3.js, HTML, CSS, JavaScript*

January 2020 - April 2020

With the recent outbreak of 2019 Novel Coronavirus (COVID-19), studying the pandemic can have considerable implications on how we approach similar outbreaks in the future. This project takes in a .CSV file from the Johns Hopkins University Center for Systems Science and Engineering team and visualizes the world map to show weekly cases. Project focused on showing users a clear visualization of the virus spread.
